> 03

**Driver's cab****Upperworks****Exterior**

The cab's industrial design is made by PORSCHE with smooth outline in aesthetic novelty. The great breakthrough marks it from the traditional engineering machinery, building a distinct brand identification. Sliding door structure is adopted, that is perfectly suitable on the crawler crane for the operator to sliding on and off the door. Fully-enclosed steel frame is applied with large faces of high-strength tempered glass on front, side and top ceiling, admitting sufficient lights. Furthermore, the cab is capacious and bright, offering wider view for the operator.

**Comfortability**

Multimode and multilevel adjustable suspension seat with minimum vibration and noise is mounted, providing the most comfortable driving experience for the operator. Air conditioning and heater are provided to adjust the indoor temperature to a perfect level, dropping from 55°C to 27.5°C within 20 minutes. The right and left armrests as well as the auxiliary operating panel are installed with operating handles, control buttons, ignition lock and other components. The seat, handles and buttons are laid out ergonomically with full consideration given to the operator's needs and habits. The control box and seat can be adjusted to the most comfortable position for the operator to make operation at ease. The driver's cab can tilt 25°upward or downward as needed for the work, or rotate to the dead ahead of the platform to facilitate the transportation.

**Engine**

- Cummins (Europe Stage V)
- Rated power: 298kW;
- Rated speed: 2100rpm;
- Max. output torque: 2169N·m;
- Speed at maximum output torque: 1,400rpm.

**Hoisting Mechanism**

- The main and aux. winch mechanism are driven independently, which is featured in compact structure, easy assembly. The hardly-worn and maintenance-free embedded wet brake ensures the winch safety.
- The hydraulic motor with variable displacement can match the load with automatic adjustment of displacement to achieve highest winch speed.
- Quality anti-twisting wire rope is selected to ensure the safety of load lifting and longer service life.
- Wire rope lug is adopted for easier and convenient rope assembly and disassembly.

Main Hoisting Mechanism	Drum diameter (non free fall)	630mm
	Drum diameter (free fall)	837mm
	Rope speed on the outermost work layer (non free fall)	0~125m/min
	Rope speed on the outermost work layer (free fall)	0~117m/min
	Wire rope diameter	28mm
	Wire rope length for main hoisting winch	480m
	Rated single line pull	15t
Auxiliary Hoisting Mechanism	Drum diameter (non free fall)	630mm
	Drum diameter (free fall)	837mm
	Rope speed on the outermost work layer (non free fall)	0~125m/min
	Rope speed on the outermost work layer (free fall)	0~117m/min
	Wire rope diameter	28mm
	Wire rope length for aux. hoisting winch	390m
	Rated single line pull	15t

## Upperworks

## Lowerworks

### Luffing Winch Mechanism

- Including: luffing mechanisms of the boom and jib;
- Drums with folded-line grooves are adopted for all luffing devices. Hydraulic motor drives the planetary gear reducer to realize multiple composite actions and it is equipped with good inching performance.

Boom Luffing Mechanism	Drum diameter	630mm
	Rope speed on the outermost work layer	0~130m/min
	Wire rope diameter	28mm
	Wire rope length of boom luffing winch	288m
	Rated single line pull	20.6t
Jib Luffing Mechanism	Drum diameter	440mm
	Rope speed on the outermost work layer	0~77m/min
	Wire rope diameter	20mm
	Wire rope length of jib luffing winch	410m
	Rated single line pull	10.5t

### Slewing Mechanism

- Large motor is adopted for the slewing hydraulic system to drive through a planetary gear reducer and enables 360° rotation. The slewing speed is 0~1.8rpm, which can realize infinitely variable speed. The slewing, free of starting and stopping impact, operates steadily and is equipped with neutral free slipping function. When the control handle is in neutral position and no slewing speed is pick up, slewing mechanism is locked to prevent backlash during crane walking or transport. Slewing bearing device: three-row roller external gear slewing bearing is adopted

### Car-body

- The hydraulic cylinder drives power pin to be connected with track frame to facilitate the assembly and disassembly. Frame structures are welded by high-strength steel. Larger chassis design greatly improves the stability of the crane.

### Crawler Assembly

- Track frame: each track frame is equipped with an independent travel driving device. A hydraulic travel motor drives the planetary gear reducer and realizes independent traveling through the transmission of driving wheel. The travel system is configured with four speed options to meet various requirements: sufficient traction is provided in low speed to realize 100% pick and carry, while faster job-site transfer is possible in high travel speed. Infinite variable speed can be realized in travel driving system.
- Track shoe: it is manufactured by advanced casting techniques and materials with high strength and good wear resistance. After assembled on the machine, the tension can be adjusted by a hydraulic jack with shims used to secure the crawler position.

**Counterweight**

- Include Carbody Counterweight, Rear Counterweight

Name	Quantity	Length	Width	Height	Unit Weight
Carbody counterweight	2	5.48m	1.97m	0.6m	20t
Rear counterweight	14	2.17m	1.96m	0.5m	6t
Rear counterweight Tray	1	7.5m	1.96m	0.7m	16t

**Hydraulic System**

- The whole hydraulic system includes that of hoisting, traveling, slewing, luffing, servo, back-stop, cooling system, and auxiliary hydraulic system. Major hydraulic components are original imports.
- Features: the main system is open circuit and load-sensitive system, which can realize flow distribution irrelevant from load. The hydraulic proportional pilot control is used for agile operation and excellent inching performance. System pressure is 32MPa.
- Electrically-controlled proportional control components are adopted for the servo system to realize precise and intelligent control.
- External controlled and outflow balance valve is adopted for the back-stop system, which ensures the safety and reliability.
- The cooling hydraulic system consists with large independent power radiator and three-in-one radiator, featured with large heat exchange power and good cooling effect.

**Operating Weight**

- The operating weight is about 255t, including the Upperworks, lowerworks, rear counterweight of basic machine, carbody counterweight, 20m basic boom and 260t hook.

**Ground Pressure**

- The average ground pressure of machine with basic boom is 0.14MPa.

**Gradeability**

- The gradeability of the track base boom machine with basic boom is 30%.

## Operating Equipment

All operating equipment adopt high-strength steel pipe, so do the steel plates. The sheaves used on boom/jib tip and hooks are all rolled material and welded structure.

### Boom

- The boom is a spatial lattice structure with equal section areas for inserts and tapered section areas for both ends. With pipes welded together, and boom tip and root strengthened with steel plates, it can better transfer the load.
- The length of the boom ranges from that 20m of the base boom to the maximum length 92m and it can be increased progressively by 3m.
- Composition: boom base 10m×1, transitional insert 6m×1, boom top 1m×1, insert section 3m×1, and insert section 6m×2 and 12m×5.

### Fixed Jib

- The fixed jib is a spatial lattice structure with equal section areas for inserts and tapered section areas for both ends. With pipes welded together, and boom tip and root strengthened with steel plates, it can better transfer the load.
- The length of fixed jib ranges from 13m to 42m, which can be increased progressively by 6m and can be installed on boom from 29m-62m.
- Composition: jib base 6.5m×1, jib insert 6m×1 and 11.5m×2, and jib top 6.5m×1.

### Luffing Jib

- The luffing jib is a spatial lattice structure with equal section areas for inserts and tapered section areas for both ends. With pipes welded together, and boom tip and root strengthened with steel plates, it can better transfer the load.
- The length of the luffing jib ranges from 21m to 63m, increased by 3m progressively, which can be installed on boom from 26m-62m.
- Composition: jib base 6m×1, jib insert 3m×1, 6m×2, jib insert 12m×3, and jib top 6m×1. The upper boom point is installed on jib top.

### Hook Block

- There are five hook capacity for options:

Hook Type	Max. lifting weight	QTY	No. of sheaves	Unit weight
260t	260t	1	9	4.82t
160t	160t	1	5	3.02t
100t	100t	1	3	2.14t
50t	50t	1	1	1.68t
16t ball hook	16t	1	None	0.92t

## Safety Devices

### Load Moment Indicator

- The proprietary load moment indicator is independently developed by SANY, which is a specially designed over-load protective system for SCC series crawler crane, with performance structural parameters of all series of crawler cranes directly stored inside, such as bearing curve, boom and jib weight, center of gravity, and other geometrical parameters. Moment calculation adopts the targeted optimization model and combines SANY technology accumulated in crawler crane industry for many years. Having the customized advantage, this system maximizes the utilization efficiency of the crane while guaranteeing the lifting safety so as to avoid the technology disconnection and different after-sales service due to the separation between the crane and LMI, thus improving the overall quality of the crane.
- As independent safety control system fully controlled by computer, the LMI can automatically detect the load weight, work radius, and boom angle, compare rated capacity with actual load, actual radius and actual boom angle. In normal operation, the LMI can intelligently determine and cut off the crane from the dangerous direction. It also has black box function and record overload information.
- LMI consists of large colourful display, main machine, angle sensor, load sensor and pressure sensor.

### Over-hoist Protection of the Main and Auxiliary Hooks

- It is used to prevent the over-hoist of the hook. When the lifting hook is raised to a certain height, the limit switch will start working, and hook will be automatically cut off from moving up by the control system. Meanwhile, the display and the buzzer will give alarms. At this moment, only hook lowering is allowed to prevent over-hoist action.

### Over-release Protection Device of the Main and Auxiliary Hook

- It is used to prevent the wire rope over-release. When the wire rope is released to the last three wraps, the limit switch will start working, and the releasing of rope will be automatically stopped by the control system. Meanwhile, the display and the buzzer will give alarms. At this moment, only rope retraction is allowed to prevent over release action.

### Assembly/Work Mode Switch

- In assembly mode, some of the safety devices are ineffective for helping crane assembly, for example, jib lower limit, LMI boom angle limit and overload.
- In work mode, all safety devices can work.

### Crane Boom/Jib Limit Device

- When the elevation angle of the boom exceeds 85° or 88° (LJ configuration) jib angle exceeds 75°, corresponding limit switch will be triggered, and the control system will automatically cut off the boom hoisting. Meanwhile, the display and the buzzer will give alarm. At this moment, boom/jib luffing winch won't hoist but it can still lower down.
- When the boom down angle is less than 30° or jib down angle is less than 15°, the control system will automatically cut off the boom/jib from further lowering. Meanwhile, the display and the buzzer will give alarms. At this moment, boom/jib luffing winch won't be able to lower. This protection is automatically controlled by Load Moment Limiter.

### Back-stop Device

- The boom and the jib are respectively equipped with a pair of back-stop cylinders. The high pressure of the cylinder shall be overcome when the boom tilts backwards, and high pressure oil will be supplemented automatically when the boom swings forwards to increase the tension and prevent the boom vibration and shaking back. When the jib reaches to an angle too small with the boom, the back-stop device can prevent it tipping back.

### Hoisting Mechanism Brake

- All hoisting brakes are spring loaded normally closed disc brakes, which are featured with large braking force, maintenance-free, safe and reliable use, and long service life.

### Closed Circuit Monitoring System(zoom camera)

- High-definition camera on boom tip, on each winch, at the rear of rotating bed and dual displays consist the CCTV monitoring system, which can display four photos at the same time. Real-time monitoring of each winch mechanism wire rope reeling and circumstances around the equipment is provided to make sure the operator can understand clearly and make sure the load safety. The camera can zoom in/out as needed.
- Components of the camera: wireless remote transmitter, wireless remote receiver, zoom camera.
- The video recorder can store the monitoring video for as long as 76hs.
- Crane operation can be stored.

## Safety Devices

### Fault Auto-Diagnosis System

- Faults can be conveniently eliminated based on the fault code.

### Black Box

- It is able to record the operation data and machine movement, and analyze the remaining running conditions and service life of machine based on the actual performance.

### Pharos

- It is mounted on the top of the boom/jib and alerts in air during night.

### Anemometer

- It is mounted on the top of the boom/jib to monitor the wind speed in real time and display relative data on the monitor.

### Electronic Level Indicator

- It displays the tilting angle of the crane on the monitor in real time and protects the safe operation of the crane.

### Lightning Protection Device

- It includes the lightning protection device and the surge protection device, which can effectively protect the electric system elements and workers from lightning.

### Boom Angle Indicator

- It is a pendulum-type angle indicator fixed on one side of the boom base.

### Hook Latch

- The lifting hook is installed with a baffle plate to prevent wire rope from falling off.

### Swing and Traveling Alarm

- During swing and traveling, the alarm horn will be blown per certain frequency to alert the personnel around the crane. The horn can be shut off through the display.

### Function Lock

- The operation will be locked by pulling up the function locking lever on the right side of the seat inside the driver's cab or when the operator left the seat, after which no operating handles will be working so that improper operation caused by the body collision when getting on and off the crane can be avoided.

### Regulation of Engine Power Ultimate Load and Stalling Protection

- The controller can monitor the engine power so as to prevent stalling.

### Remote Monitoring System

- It monitors and analyzes the operation data so as to realize remote diagnosis of faults and timely solution.

### Proactive Safety Control Technology

- Reduce the slewing speed automatically based on boom length and make it safer;
- Flexible safety protection: reduce the action speed when approaching safety limit, making it stable and reliable;
- Real-time monitor of hydraulic oil temperature. Limit the activity according to hydraulic temperature and protect the hydraulic components effectively;
- In man-machine interface, this protection can be set valid or invalid, and provide more human-friendly design.

> 10

**Main Performance Parameters**

Major Performance Specifications of SCE2800A			
Performance Indicators		Unit	Parameter
H Configuration	Max. rated lifting capacity	t	280
	Max. rated lifting moment	t·m	187.5×8=1500
	Boom length	m	20~92
	Boom angle	°	30~85
FJ Configuration	Longest boom + longest fixed jib	m	62+42
	Boom to jib angle	°	10, 30
Luffing jib	Largest lifting moment	t·m	102×12=1224
	Longest boom + longest luffing jib	m	62+63
	Boom luffing angle	°	65~88
Speed	Speed of single rope of the main hoist (outermost work layer)	m/min	0~125
	Max speed of single rope of the main hoist (free fall) (optional)	m/min	0~117
	Max speed pf single rope of the Aux. hoist	m/min	0~110
	Boom hoist winch speed (outermost layer)	m/min	0~132
	Jib hoist winch speed (outermost layer)	m/min	0~77
	Slewing speed	rpm	0~1.8
	Travel speed	km/h	0~1.0
	Gradeability	%	30
Machine weight	Basic boom, 100t rear counterweight, 40t carbody counterweight, 260t hook	t	255
Engine	Rated power	kW	298
	Rated speed	rpm	2100
	Max. set speed	rpm	1800
Transport	Max. transport weight of single part (with main and aux. hoist winches)	t	45.7
	Max. transport dimension of single part(L × W × H)	mm	13320×3000×3200
	Average ground pressure	MPa	0.14

Note: Any change in the technical parameters and configuration due to advancement in technology may occur without prior notice.

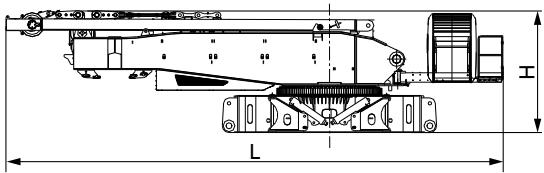

## Basic Dimensions of Crane

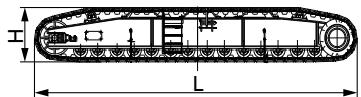

## Transportation Dimensions

Note:

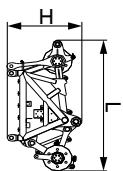

- 1.The transport dimensions of each part in the table are schematic, not proportional to the real parts. The dimensions are designed value without package considered.
- 2.Weight is designed value that the actual manufactured part may deviate a little.
- 3.The dimensions and weight of each part may change due to product upgrading. The final values are subject to the new product.

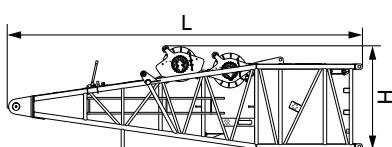

Basic Machine	×1
Length (L)	13.32m
Width (W)	3.00m
Height (H)	3.20m
Weight	45.7t

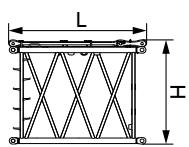

Crawler Assembly	×2
Length (L)	9.15m
Width (W)	1.20m
Height (H)	1.40m
Weight	22.0t

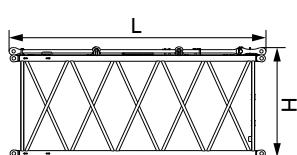

Boom Tip (with sheave block)	×1
Length (L)	3.24m
Width (W)	2.07m
Height (H)	1.62m
Weight	3.11t

Boom Base (with main/ aux. hoist winch)	×1
Length (L)	10.35m
Width (W)	2.52m
Height (H)	2.99m
Weight	13.88t

3m Boom insert	×1
Length (L)	3.18m
Width (W)	2.52m
Height (H)	2.66m
