SCE8000A

Crawler Crane
800 Tons Lifting Capacity

Quality Changes the World

Max. lifting moment: 12000t·m
Max. Longest boom combination: 99m+96m
Longest boom for wind energy configuration: 165m+12m

The parameters, pictures and standard/optional equipment are only for reference in this brochure, the actual machine is based on the effective price list and contract.

Cab

Appearance

- The industrial modeling of the cab is designed by Porsche. It has a smooth, elegant and novel appearance, which is a significant breakthrough when compared with traditional engineering machinery and has excellent brand identification. The cab has a sliding door structure, which is suitable for the crawler crane and convenient for the operator. It is adopted with fully-sealed steel frame structure with a large area of high strength toughened glass installed on the front, side and top, transmitting more light. The interior space of the cab is spacious and bright, with a broader sight view.

Comfort

- It is adopted with shock absorption, noise reduction, suspended, multi-mode and multi-stage adjustable seat, thus providing the operator with the most comfortable driving experience. The famous USA RedDot air conditioner is adopted, ensuring more reasonable air outlet and efficient cooling. It takes no more than 20 min to cool the cab from 55°C to 27.5°C. The left and right armrest boxes and auxiliary control boxes are equipped with control handles, control buttons, ignition locks and other elements. The seats, control handles and control buttons are arranged according to ergonomic design, fully considering the driver's operation demands and habits. The control box can be adjusted to the most suitable position with the seat to ensure more comfortable operation. The cab can tilt up to 15° according to the work demands, and can also rotate to the front part of the rotating bed for the convenience of transport.

Lower structure

Carbody

- The hydraulic cylinder driving power pin is connected with the crawler frame for easy assembly and disassembly. The high-strength steel welded frame structure is adopted. Larger carbody design significantly improves the stability of the overall crane. The carbody counterweight is 80t (40t in the front and rear respectively), and it can realize self-assembly.

Crawler Assembly

- Crawler frames: each crawler frame is equipped with independent traveling driving devices. The planetary gear tapered is driven by the hydraulic traveling motor, and independent traveling is realized through the transmission of the driving gear. The driving system has two speed positions, namely high speed and low speed: The low speed can provide sufficient traction force to realize 100% travel with load; the high speed can provide higher speed to improve the transit efficiency. The traveling drive can also realize stepless speed change.
- Track shoe: It is made of materials with high strength and high wear resistance through advanced casting process. After being installed on the equipment, its tension can be adjusted through the hydraulic cylinder, and the gasket position can be adjusted to achieve the ideal tension.

One-key Leveling of Outriggers

- With the machine gravity calculated in real time, the outrigger balance is detected by the cylinder pressure sensor, the outriggers can be adjusted to level state by one key to reduce assembly time and improve efficiency.

Superstructure

Engine

- Cummins (Euro Tier V).
- Rated power: 447 kW.
- Rated speed: 1800 rpm.
- Maximum output torque: 2542 N·m.
- Speed at the maximum output torque: 1400 rpm.

Load hoist winch mechanism

- The planetary gear box driven by hydraulic motor of variable displacement is used to control the main load hoist I and main load hoist II to lift and lower the load. It provides good inching performance, and also ensures quick powered lifting of main load hoist winches.
- Only one hoist winch is needed for load below 400t, while for load above 400t, both load hoist winches are required. The main hoist winch I and main hoist winch II have synchronization function.
- The maximum number of parts of line is 60. The multilayer winding of rope-folding drum ensures no rope disorder. The gear box is featured in low noise, high efficiency, long service lift and easy access to oil change.

Main load hoist winch W1-1 (main load hoist winch 1) W1-2 (main load hoist winch 2)	Drum diameter	726mm
	Speed of rope in the outermost working layer	0-164m/min
	Diameter of wire rope	28mm
	Rope length	1250m
	Rated line pull	17.2t
Auxiliary load hoist winch W2	Drum diameter	574mm
	Speed of rope in the outermost working layer	124m/min
	Diameter of wire rope	28mm
	Rope length	600m
	Rated line pull	17.2t

Boom hoist winch mechanism

- Components: Boom luffing mechanism, jib luffing mechanism, superlift luffing mechanism.
- All luffing winches adopt fold-line drums, which are driven by hydraulic motor through the planetary gear box and can realize a number of compound actions and good inching performance.

Boom luffing mechanism W3	Drum diameter	574mm
	Speed of rope in the outermost working layer	63*2m/min
	Diameter of wire rope	28mm
	Rope length	800m
Jib luffing mechanism W4	Drum diameter	574mm
	Speed of rope in the outermost working layer	0~148m/min
	Diameter of wire rope	28mm
	Rope length	1050m
Superlift luffing mechanism W5	Drum diameter	574mm
	Speed of rope in the outermost working layer	0~164m/min
	Diameter of wire rope	28mm
	Rope length	1360m

Slewing mechanism

- The slewing hydraulic system adopts double motor to drive the spur gear through the planetary gear box, which can realize 360° rotation, slewing speed of 0~0.8 rpm, stepless speed regulation, no backlash at starting or stopping, stable operation and free slipping function at neutral position. Slewing ring: It is adopted with three-row roller type slewing bearing with external gears. The main unit can be separated from the lower structure through the adaptor ring.

Working implement

- The operating equipment is made of high-strength steel tubes and high-strength steel plates, and the rolled welded pulleys are adopted on the boom head and hook.

Boom

- The boom is a spatial lattice structure of welded tubes with equal section areas of inserts and tapered sections for two ends. The boom top and root are strengthened with steel plates, which is easier for load transfer.
- The length of the boom is 99m.
- Compositions: boom base 10.5m, 1 transition section of 12 m, 1 connecting tip of 1.5m, 1 insert of 3m, 2 inserts of 6m, and 5 inserts of 12 m.
- The extension jib is installed on the boom top.

Fixed jib

- The space truss structure with variable section and steel pipe welding of fixed jib are more conducive to load transfer.
- The length of the fixed jib is 12m.
- Compositions: jib base 6m×1, jib top 6m×1.

Luffing jib

- The luffing jib is a spatial lattice structure of welded tubes with equal section areas of inserts and tapered sections for two ends. The jib top and root are strengthened with steel plates, which is easier for load transfer.
- The length of the luffing jib is 96m.
- Compositions: jib base 10.5m×1, boom insert 12m×1(H8E), tapered section 6m×1, insert 6m×2, insert 12m×4, jib top 7.5m.
- The extension jib is installed on the jib top.

Power boom

- The power boom is a spatial lattice structure of welded tubes with equal section areas of inserts and tapered sections for two ends. The boom top and root are strengthened with steel plates, which is easier for load transfer.
- The length of the power boom is 108m.
- Compositions: transition boom top:12m×1, transition boom down:12m×1, boom insert 12m×7.

Eagle tip

- The space truss structure with variable section and steel pipe welding of eagle tip are more conducive to load transfer.
- The length of the eagle tip is 7m.
- Compositions:Boom top 4.5m, eagle tip 7m.

Superlift device

- The superlift mast is a spatial lattice structure of welded tubes with equal section areas of inserts and tapered sections for two ends. The mast base and top are strengthened with steel plates, which is easier for load transfer.
- The length of the superlift mast is 42m.
- Compositions: superlift base 12m×1, insert 6m×1, insert 12m ×1, top 12m×1.

Hook

- There are 5 types of hook available. The specific parameters are as follows:

Hook	Maximum lifting capacity	Quantity	Number of pulleys	Basic weight	Recommended weight	CW block number of recommended weight
800t hook	800t	1	2×15	18.7t	23.2t	6
500t hook	500t	1	2×9	11.3t	17.3t	8
250t hook	250t	1	2×5	6.2t	12.2t	8
160t hook (single pulley block)	160t	1	5	2.5t	5.5t	4
18t ball hook	18t	1	0	1.0t	/	/
Hook CW block	/	12	/	0.75t	/	/

Note: Recommended weight is officially recommended for use.
Recommended weight=Hook basic weight + hook CW weight.

Additional device

- Side outriggers.
- Lower structure jack cylinders.
- Crawler self-assembly cylinder (on the boom hoist mast).
- Portable hydraulic power pack.
- Quick connector ring (connecting the superstructure/lower structure).

Counterweight

- The counterweight includes the carbody counterweight, rear counterweight, superlift counterweight, and the specific parameters are as follows:

Name	Quantity	Length(m)	Width(m)	Height(m)	Unit weight(t)
Carbody counterweight	4	2.40	2.85	0.484	10
Carbody counterweight tray	2	2.97	5.43	1.06	20
Rear counterweight	20	2.40	2.85	0.484	10
Rear counterweight tray	2	3.00	2.66	2.40	15
Superlift counterweight	36	2.40	2.85	0.484	10
Superlift counterweight tray	1	9.25	2.50	1.80	32
Rear counterweight additional tray	1	3.64	2.95	1.74	6.5

Hydraulic system

- Hydraulic system includes load hoist hydraulic system, traveling hydraulic system, slewing hydraulic system, boom hoist hydraulic system, servo hydraulic system, back-stop hydraulic system, cooling system, auxiliary hydraulic system. The main hydraulic components are original parts imported.
- Characteristics: The load hoisting, traveling, boom hoist and slewing hydraulic systems are of closed loop type, featuring energy saving, high efficiency, quick response, low heat radiation and long service life.
- The servo system adopts electrical proportional control components to facilitate the accurate and intelligent control.
- The back-stop hydraulic system adopts balance valve of external control and unloading, and it is mounted on the cylinder to make sure it is safe and reliable.
- The cooling system is characterized by higher power and quicker cooling.

Working weight

- The working weight is about 610t, including superstructure, lower structure, main unit counterweight, central counterweight, 24m base boom and 800t hook.

Ground pressure

- The average ground bearing pressure of the crane with base boom is 0.2 MPa.

Gradeability

- The gradeability of the crane with base boom is 15%.

Safety devices

Load Moment Indicator

- The proprietory load moment limiter independently -developed by Sany is adopted, which forms a network with other controllers through CAN bus line, so as to realize safe and reliable control. The load moment limiter can automatically detect the hoisting weight of the crane and the angle of the boom, and display the rated load capacity, actual load, working radius, and the allowable height of the hook.
- The load moment limiter system consists of a large-screen color display, a host computer, angle sensors, tension sensors, pressure sensors and other components.

Over-hoist Protection of the Main and Auxiliary Hooks

- It is used to prevent the over-hoist of the hook. When the lifting hook is raised to a certain height, the limit switch will start working, and hook will be automatically cut off from moving up by the control system. Meanwhile, the display and the buzzer will give alarms. At this moment, only hook lowering is allowed to prevent over-hoist action.

Over-release Protection Device of the Main and Auxiliary Hook

- It is used to prevent the wire rope over-release. When the wire rope is released to the last three wraps, the limit switch will start working, and the releasing of rope will be automatically stopped by the control system. Meanwhile, the display and the buzzer will give alarms. At this moment, only rope retraction is allowed to prevent over release action.

Boom Angle Limit

- When the elevation angle of the boom exceeds 85° or jib angle exceeds 75° , corresponding limit switch will be triggered, and the control system will automatically cut off the boom hoisting. Meanwhile, the display and the buzzer will give alarm. At this moment, boom/jib luffing winch won't hoist but it can still lower down.
- When the boom down angle is less than 30° or jib down angle is less than 15°, the control system will automatically cut off the boom/jib from further lowering. Meanwhile, the display and the buzzer will give alarms. At this moment, boom/jib luffing winch won't be able to lower. This protection is automatically controlled by Load Moment Limiter.

Back-stop Device

- The boom and the superlift mast are respectively equipped with a pair of back-stop cylinders. The high pressure of the cylinder shall be overcome when the boom tilts backwards, and high pressure oil will be supplemented automatically when the boom swings forwards to increase the tension and prevent the boom vibration and shaking back.
- The jib rear mast is equipped with a pair of back-stop cylinders, while the jib front mast is equipped with a pair of pneumatic cylinders to prevent the mast from the backward inclination and tension of the jib luffing wire rope.

Brake of Hoisting Mechanism

- All hoisting brakes are spring loaded normally closed disc brakes, which are featured with large braking force, maintenance-free, safe and reliable use, and long service life.

Closed Circuit Monitoring System

- It can be used to monitor the winding conditions of wire ropes of each hoisting mechanism, the conditions of superlift weight, and conditions around the equipment.
- Video recorder can store video as long as 76 hours.
- Machine operation can be recorded.

Failure Auto-Diagnosis System

- Failulre code can help troubleshooting easily.

Safety devices

Black Box

- It is able to record the operation data and machine movement, and analyze the remaining running conditions and service life of machine based on the actual performance.

Pharos

- It is mounted on the top of the boom/jib and alerts in air during night.

Anemometer

- It is mounted on the top of the boom/jib to monitor the wind speed in real time and display relative data on the monitor.

Electronic Level Indicator

- It displays the tilting angle of the crane on the monitor in real time and protects the safe operation of the crane.

Lightning Protection Device

- It includes the lightning protection device and the surge protection device, which can effectively protect the electric system elements and workers from lightning.

Hook Latch

- The lifting hook is installed with a baffle plate to prevent wire rope from falling off.

Swing and Traveling Alarm

- During swing and traveling, the alarm horn will be blown per certain frequency to alert the personnel around the crane. The horn can be shut off through the display.

Function Lock

- The operation will be locked by pulling up the function locking lever on the right side of the seat inside the driver's cab or when the operator left the seat, after which no operating handles will be working so that improper operation caused by the body collision when getting on and off the crane can be avoided.

Regulation of Engine Power Ultimate Load and Stalling Protection

- The controller can monitor the engine power so as to prevent stalling.

Remote Monitoring System

- It monitors and analyzes the operation data so as to realize remote diagnosis of faults and timely solution.

Proactive Safety Control Technology

- Swing speed can be automatically reduced based on boom length to make it safer.
- Flexible safety protection reduces the speed when the mechanism approaches to the safety limit position, which ensures reliability.
- Real-time monitor of hydraulic oil temperature allows limits on the action speed based on oil temperature, which protect the hydraulic components effectively.
- The protection can be set on man-machine interface as customer needs.

Main performance parameters

Major Performance & Specifications of SCE8000A		
Performance indexes	Unit	Parameter
Maximum rated lifting capacity	t	800 (6m operating radius)
Maximum rated lifting capacity (with superlift)	t	800 (12m operating radius)
Maximum rated lifting moment	t·m	4956
Maximum rated lifting moment (with superlift)	t·m	12000
Boom length	m	24~99
Boom length (with superlift)	m	42~111
Mixed boom length	m	84~123
Mixed boom length (with superlift)	m	90~147
Mixed boom length (with superlift and power boom)	m	102~165
Luffing jib length	m	24~96
Luffing jib length (with superlift)	m	24~96
Length of short fixed jib	m	12
Longest boom combination (LJDB working condition)	m	99+96
Longest boom for wind energy configuration (without superlift)	m	120+12
Longest boom for wind energy configuration (with superlift)	m	165+12
Longest boom for eagle tip configuration (with superlift)	m	171+7
Boom luffing angle	°	30~85
Jib luffing angle	°	15~75
Maximum rope speed of single rope of main load hoist winch (outermost working layer)	m/min	164
Maximum rope speed of single rope of aux. load hoist winch (outermost working layer)	m/min	124
Maximum rope speed of single rope of boom luffing mechanism (outermost working layer)	m/min	63×2
Maximum rope speed of single rope of jib luffing mechanism (outermost working layer)	m/min	148
Maximum rope speed of single rope of superlift luffing mechanism (outermost working layer)	m/min	164
Slewing speed (no load)	r/min	0.8
Travelling speed	km/h	0~0.6
Gradeability (with basic boom, cab facing backward)	%	30
Rated output power of the engine	kW/r/min	447/1800
Machine weight (basic boom, 230t machine rear counterweight, 80t carbody counterweight, with 800t hook)	t	610
Average ground bearing pressure of the crawler (base boom, 230t machine counterweight, 80t carbody counterweight, 800t hook)	MPa	0.2
Machine counterweight	t	230
Superlift counterweight (including tray)	t	390
Carbody counterweight (including tray)	t	80
Maximum transportat dimensions of single piece (L×W×H)	mm	14600×3400×2640
Maximum transport weight of single piece	t	52
Transport weight of rotating bed (with quick connector ring)	t	48

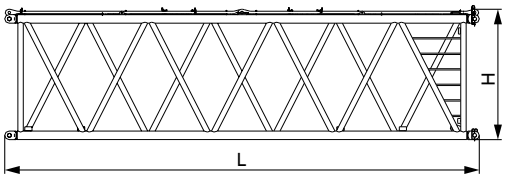
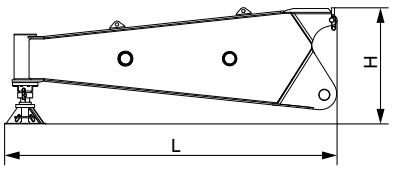
12m power boom insert C (ZH8C)	×2
Length (L)	12.24m
Width (W)	3.50m
Height (H)	3.02m
Weight	10.0t



12m power boom insert D (ZH8D)	×3
Length (L)	12.24m
Width (W)	3.50m
Height (H)	3.02m
Weight	9.1t



Side erection outrigger	×2
Length (L)	4.35m
Width (W)	1.25m
Height (H)	1.52m
Weight	2.6t

Note:
1.The transport dimensions of each part are schematic, may not be proportional to the real parts. The dimensions are designed value without package considered.
2.The weight is designed value that the actual manufactured part may deviate slightly.
3.The dimensions and weight of each part may upgrade along the time. The final values are subject to the new product.

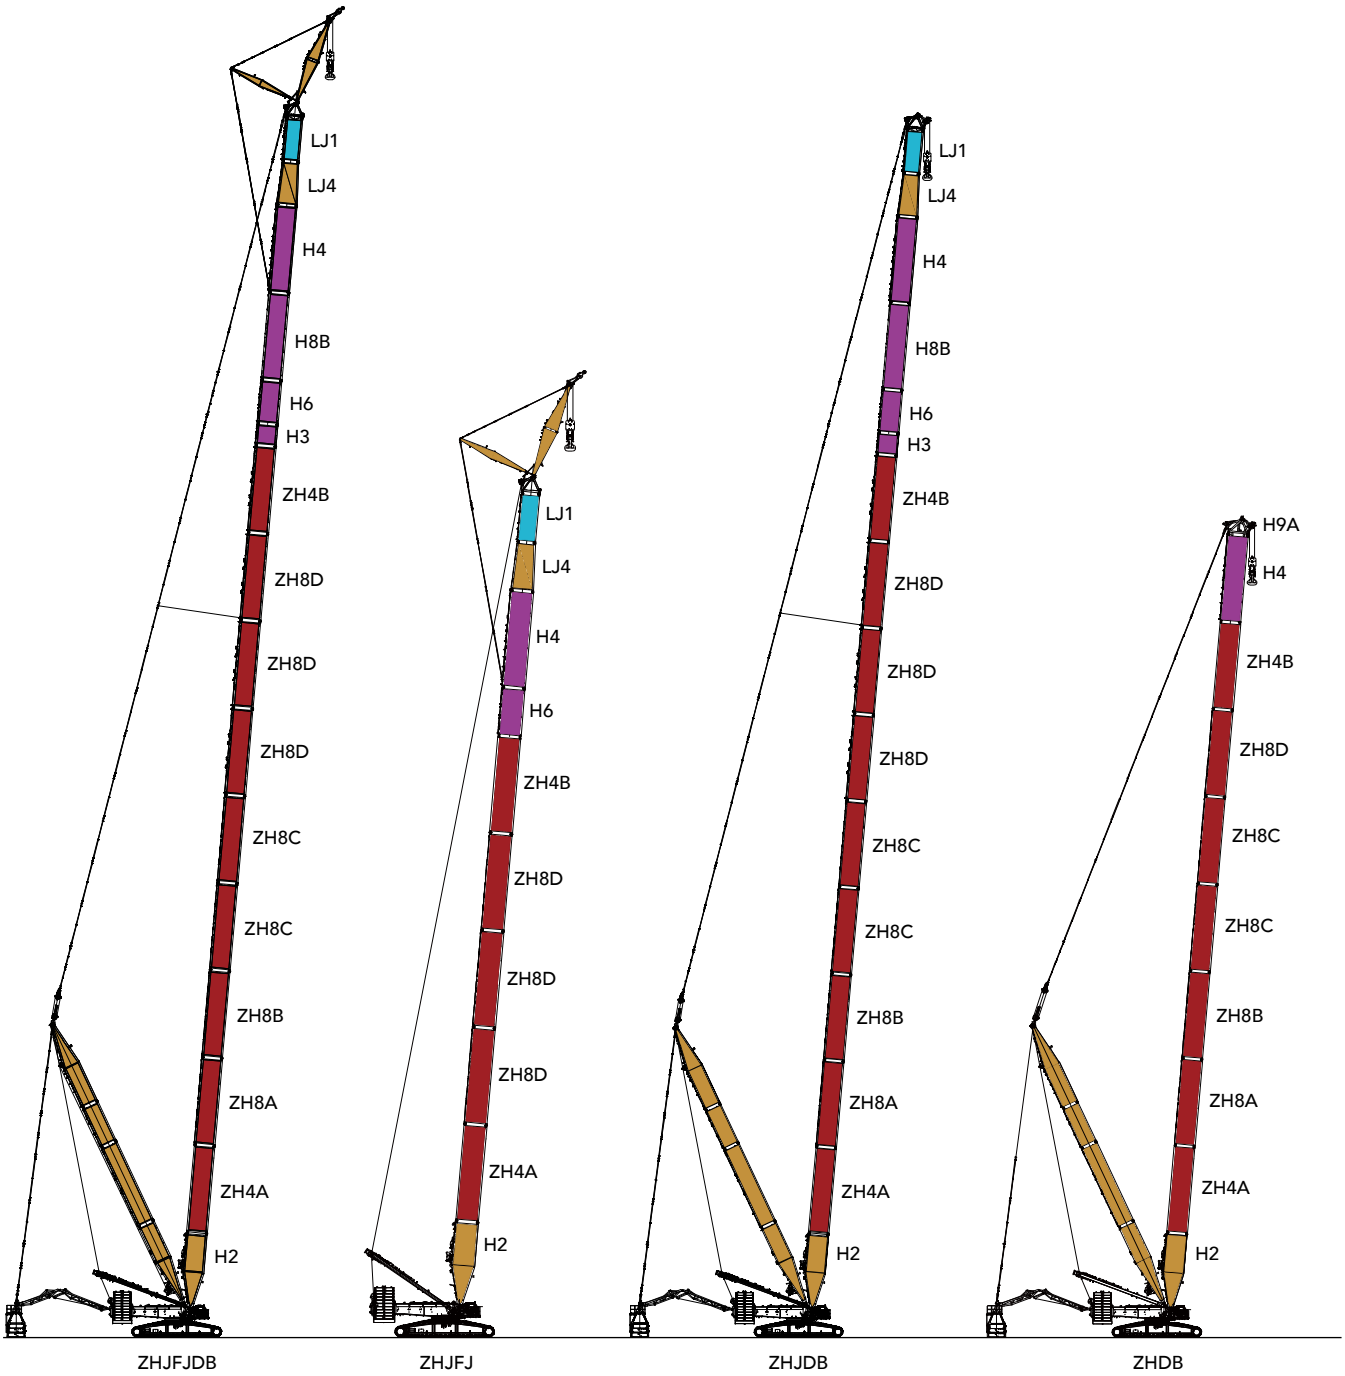
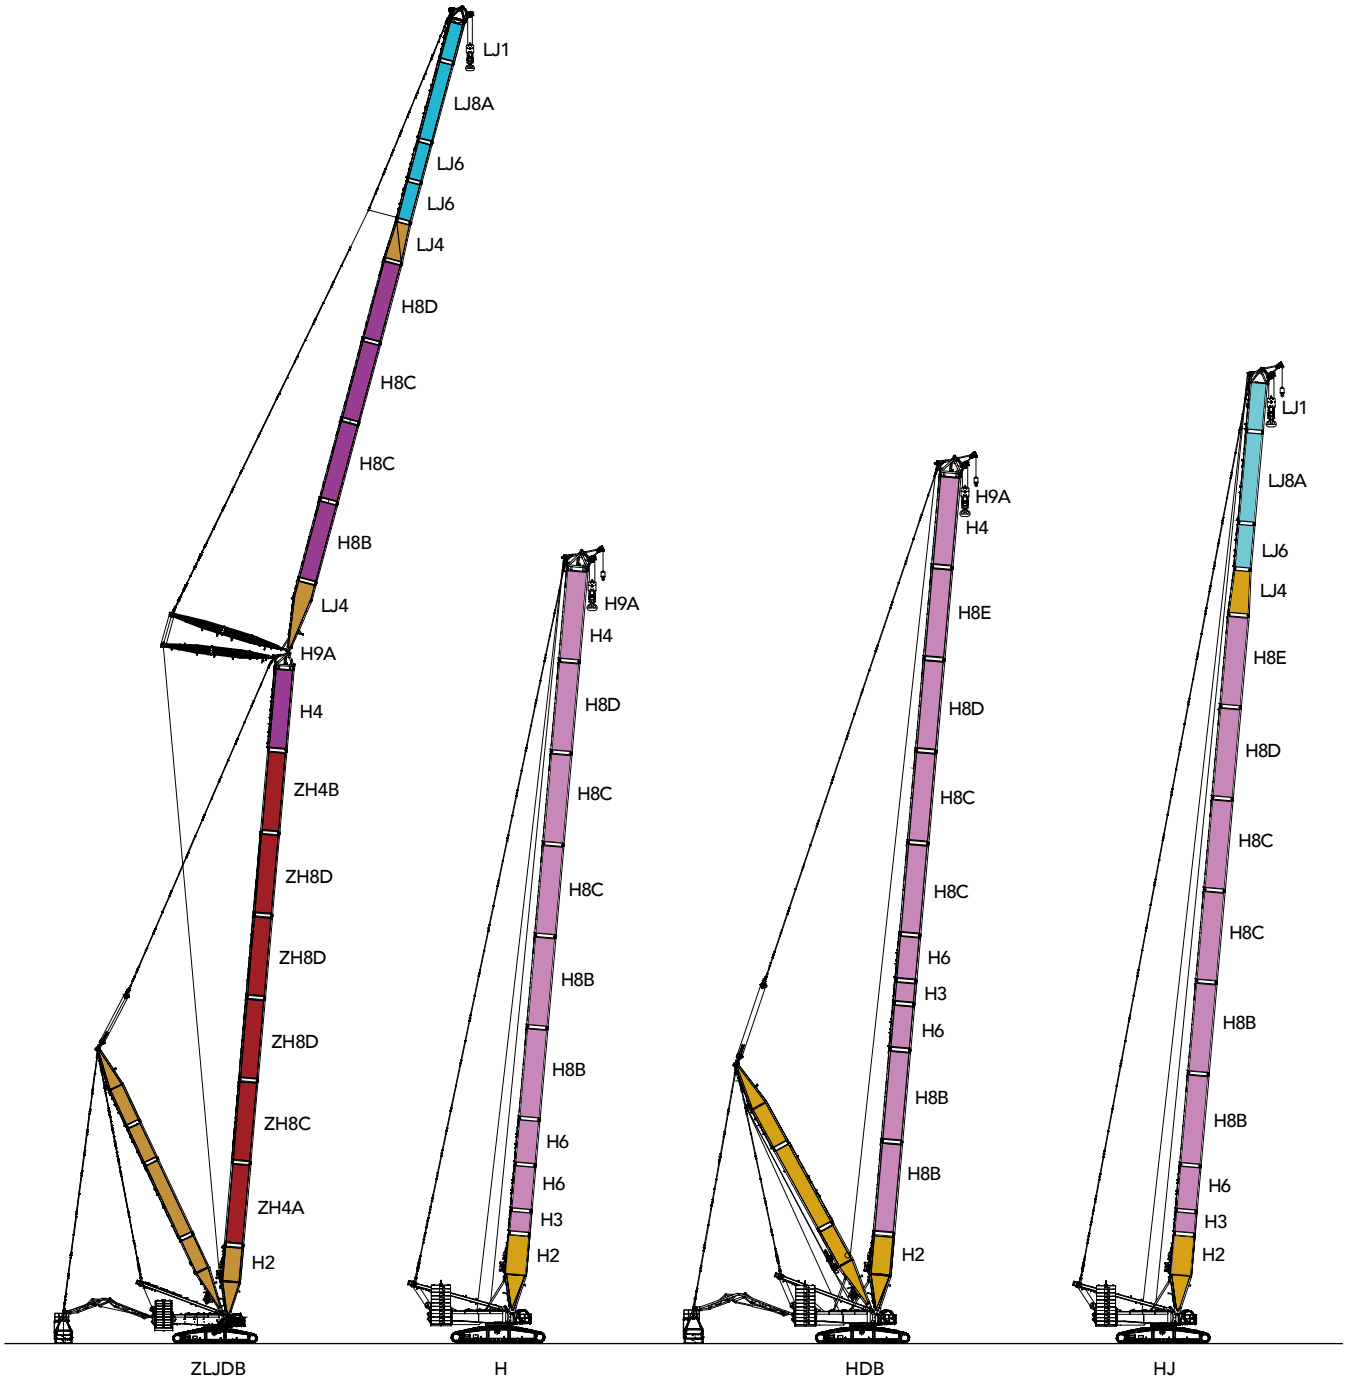
Combination



Configuration	Boom combination	Boom length
ZHJFJDB	Power boom+mixed boom+fixed jib+superlift mast+superlift counterweight	(102m+12m)~(165m+12m)
ZHJFJ	Power boom+mixed boom+fixed jib	(84m+12m)~(102m+12m)
ZHJDB	Power boom+mixed boom+superlift mast+superlift counterweight	(102m~165m)
ZHDB	Power boom+boom+superlift mast+superlift counterweight	(48m~108m)

The schematics above are reference for loading only.

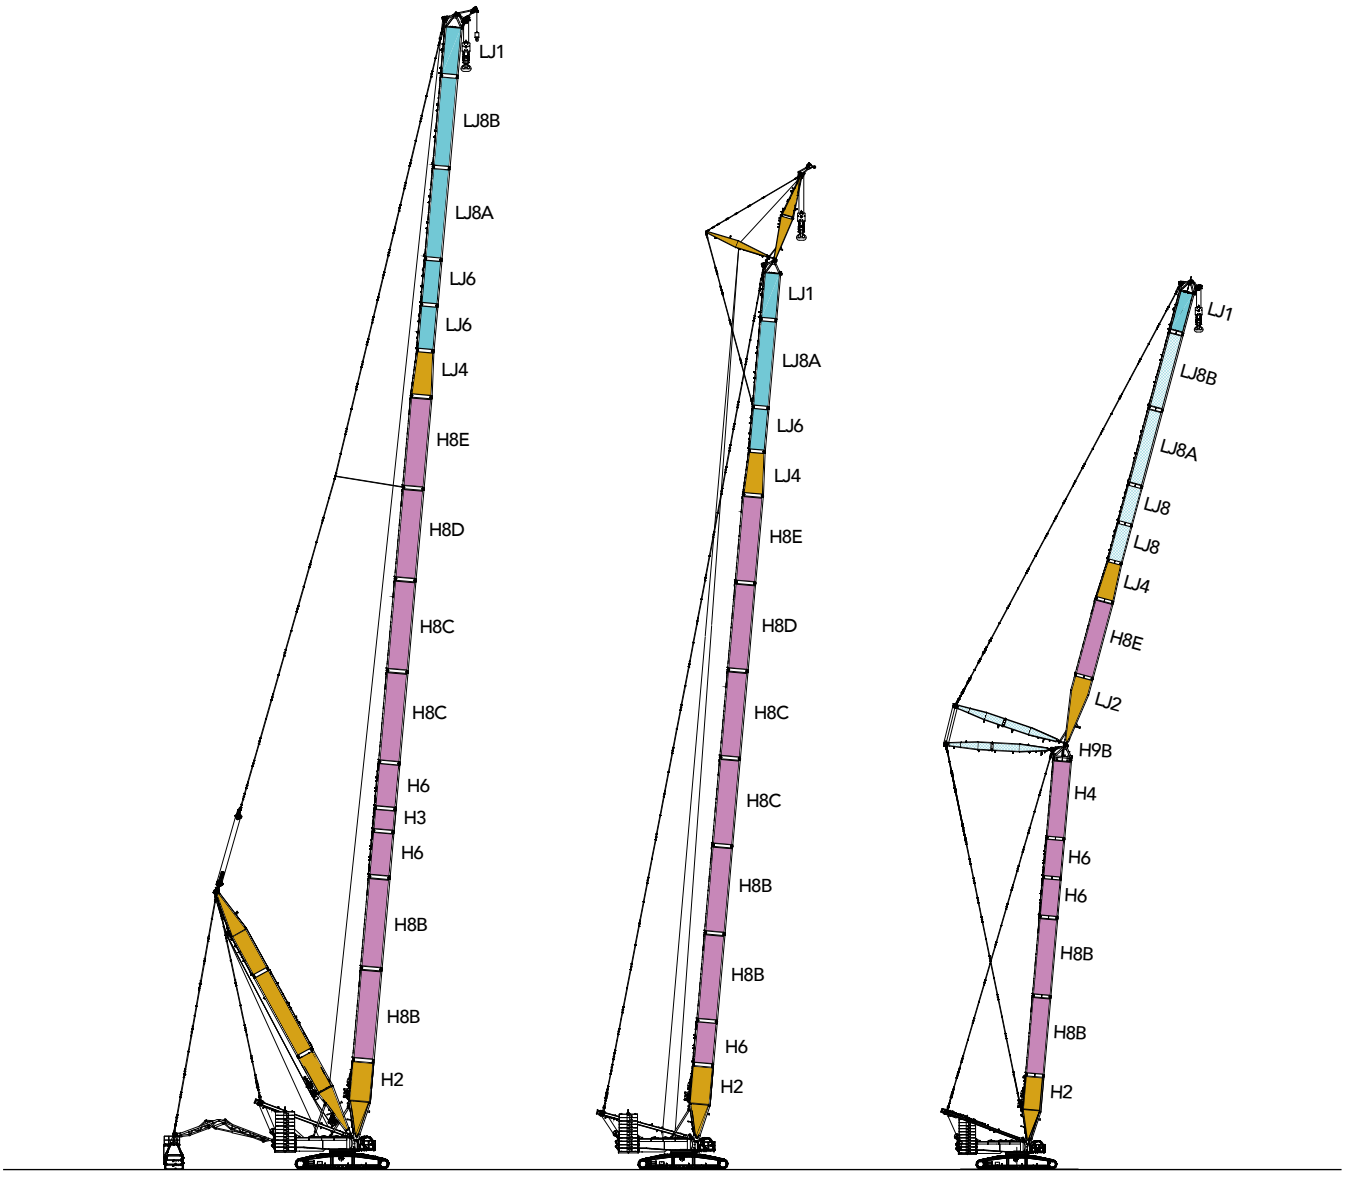
Combination



Configuration	Boom combination	Boom length
ZLJDB	Power boom+boom+luffing jib+superlift mast+superlift counterweight	(48m~96m)+(24m~96m)
H	Boom	(24m~99m)
HDB	Boom+superlift mast+superlift counterweight	(42m~111m)
HJ	Mixed boom	(84m~123m)

The schematics above are reference for loading only.

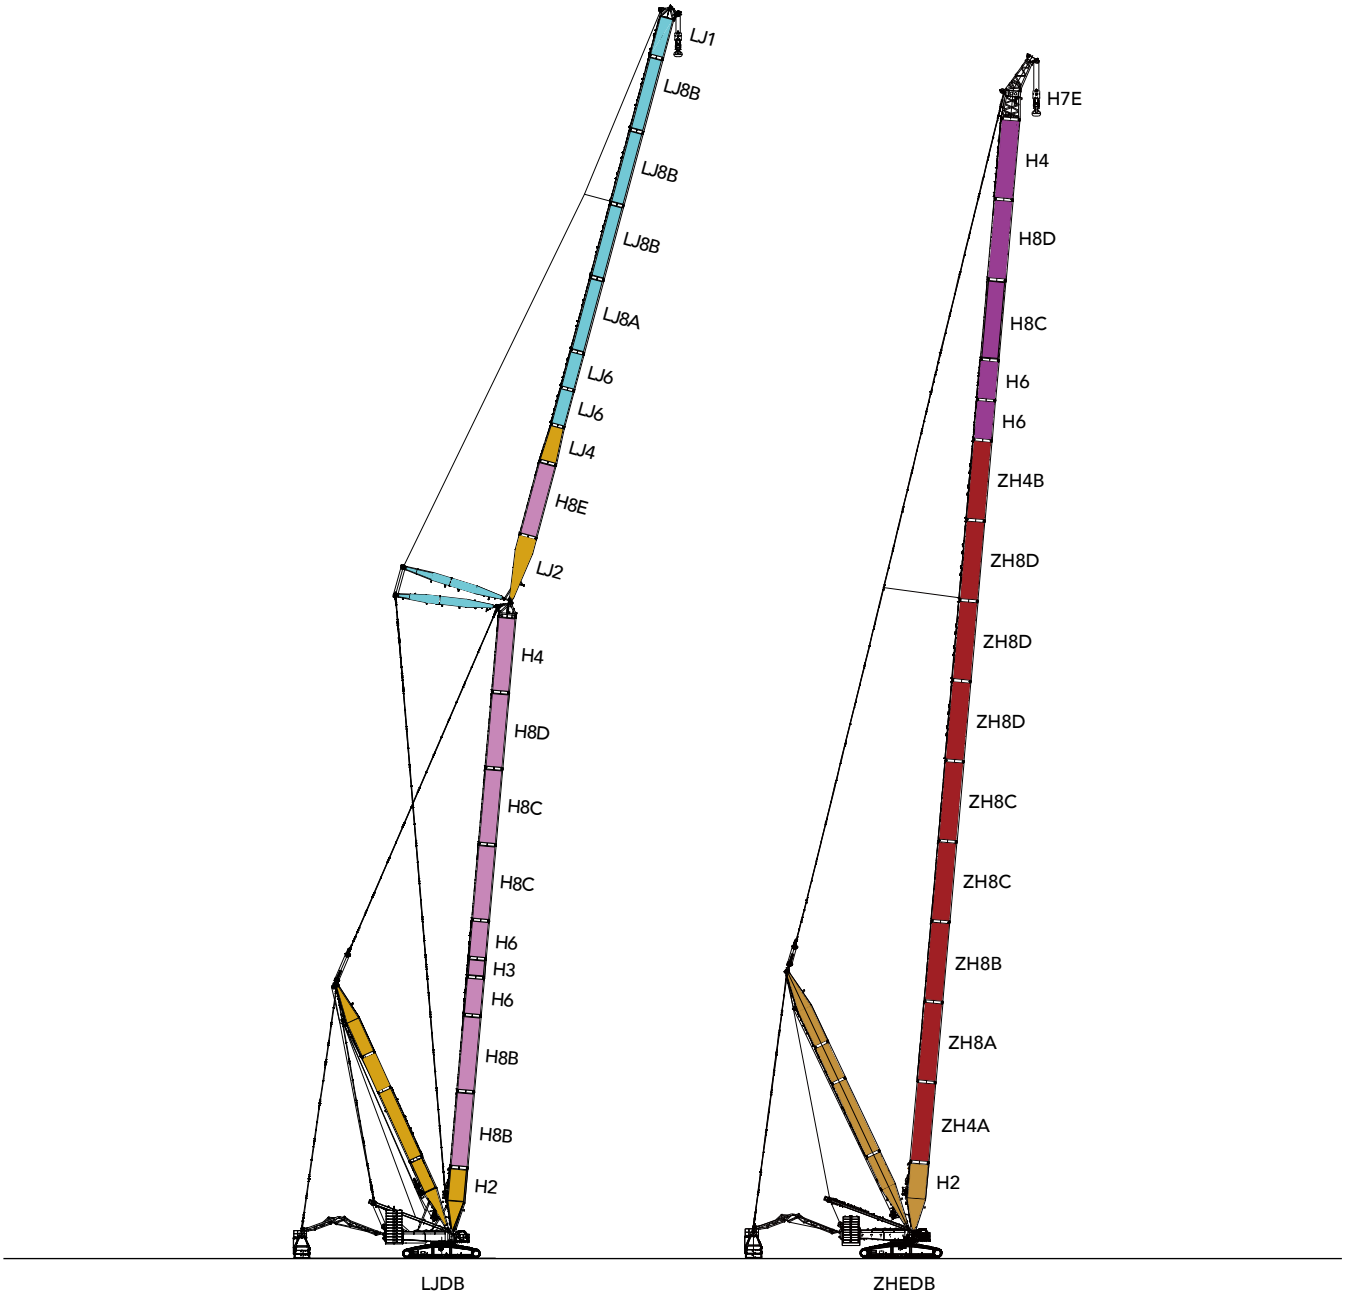
Combination



Configuration	Boom combination	Boom length
HJDB	Mixed boom+superlift mast+superlift counterweight	(90m~147m)
HJFJ	Mixed boom+fixed jib	(84m+12m)~(120m+12m)
LJ	Boom+luffing jib	(30m~60m)+(24m~72m)

The schematics above are reference for loading only.

Combination



Configuration	Boom combination	Boom length
LJDB	Boom +luffing jib+superlift mast+superlift counterweight	(42m~99m)+(24m~96m)
ZHEDB	Power boom+boom+eagle tip+superlift mast+superlift counterweight	(93m+7m)~(171+7m)

The schematics above are reference for loading only.

Load chart of LJDB configuration

Note:
1. Meet ISO 4305 standard;
2. The rated load in the table includes the weight of hook, wire rope and other spreader. The weight to be lifted is the sum of the rated load minus the weight of the above items.

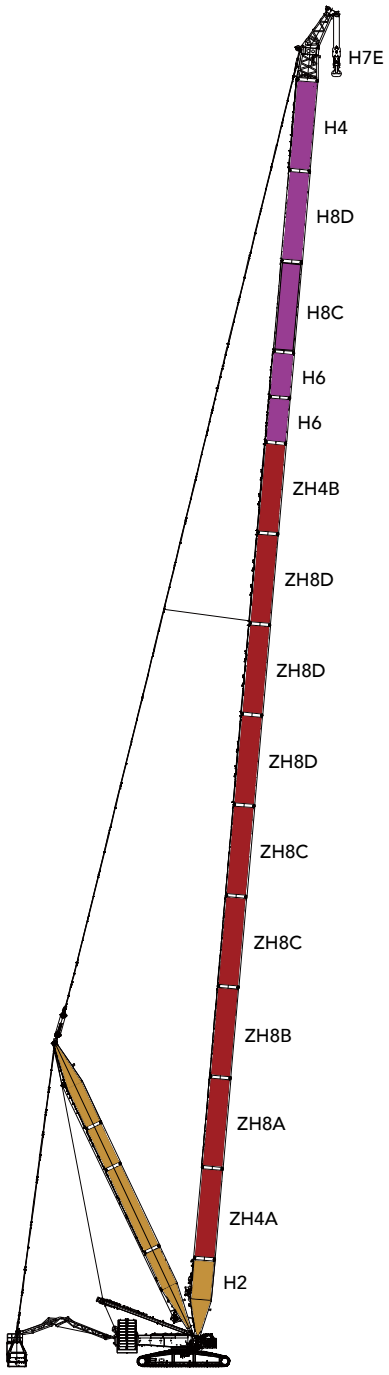
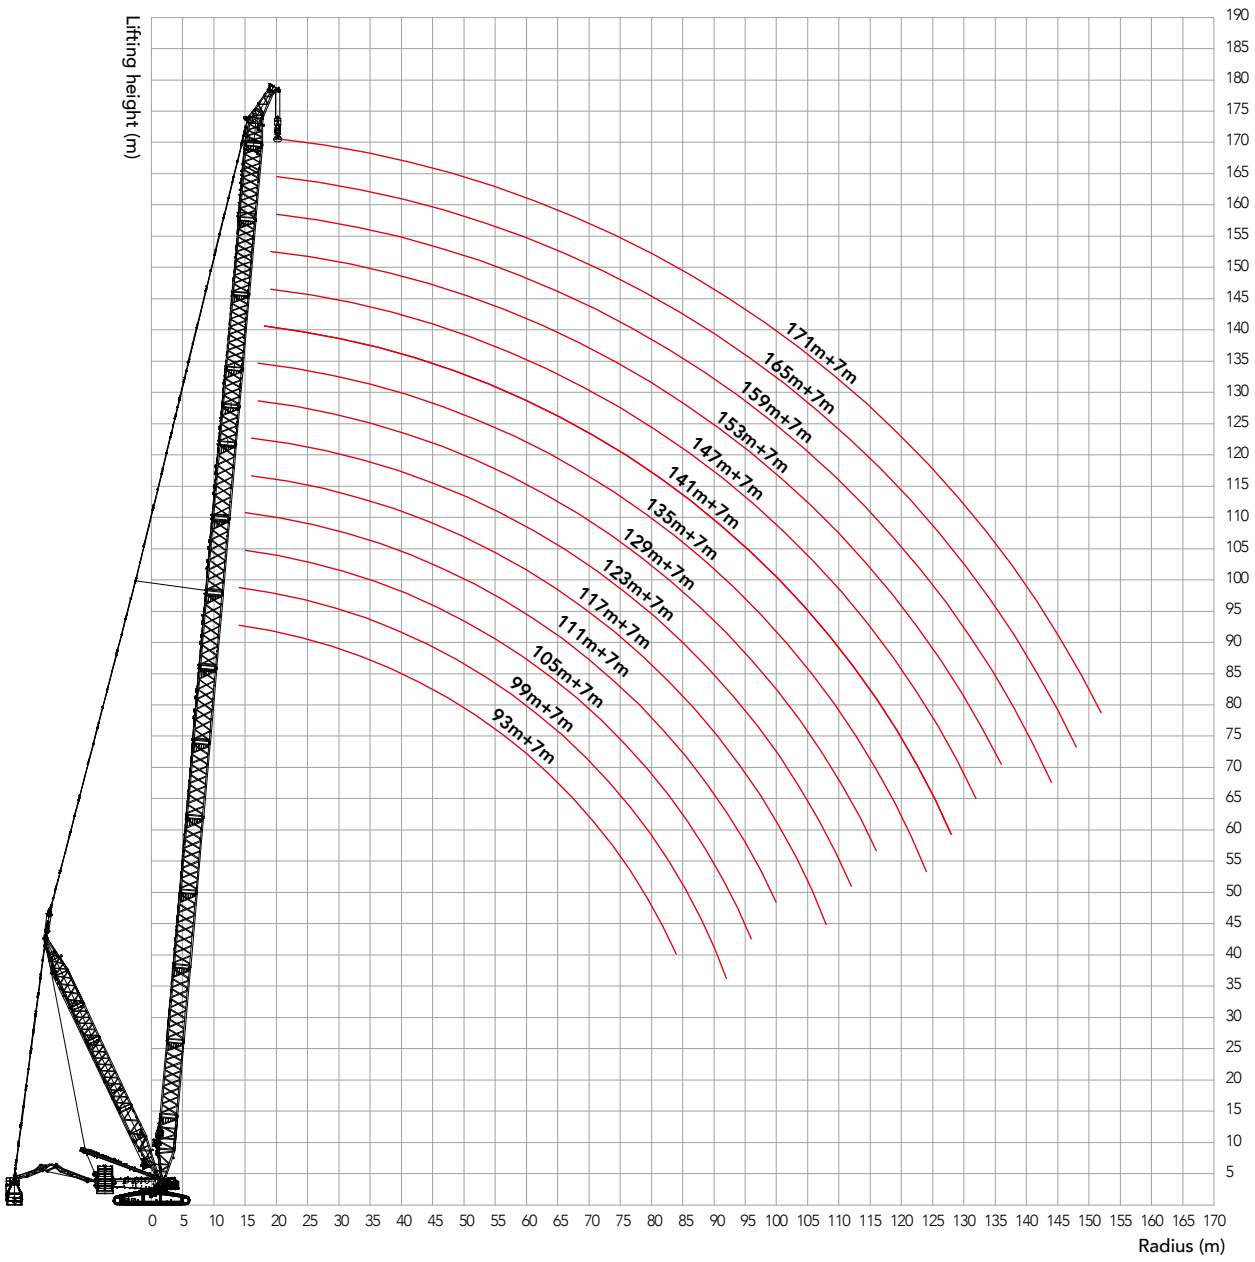
171	1	1	2	3	-	2	1	1	

Note: 10.5 m boom base, 12 m boom transition section, 12m power boom lower transition, 12m power boom upper transition.
In this working condition with boom length (135m+ 7m-171m +7m), the waist rope must be used, otherwise the boom frame may be broken.



ZHEDB
(93m+7m)~(171m+7m)

ZHEDB working radius diagram



Unit: t

Load chart of ZHEDB configuration

Note:
1. Meet ISO 4305 standard;
2. The rated load in the table includes the weight of hook, wire rope and other spreader. The weight to be lifted is the sum of the rated load minus the weight of the above items.

ZHEDB Load Chart
(Boom length 93~171m, Superlift radius 22m, Superlift counterweight 390t, Rear counterweight 230t, Carbody counterweight 80t)
